

Conditions for Test 1 Involvement

Truman Abbe

July 2026

I, Truman Abbe, will offer my time and skill for the design, development, and first test of a small, bipropellant liquid rocket engine under the following conditions:

1. A soft deadline of August 31, 2026, will be set for the first test, and the project will be kept discrete.
2. The engine will have a maximum thrust of 50 N (≈ 10 lbf). The propellant tanks will be limited to 2.5 lbs for N₂O and 0.5 L for IPA.
3. I, Truman Abbe, will personally handle the propellants and retain custody of the N₂O bottle.
4. I, Truman Abbe, will design the plumbing system.
5. A team of a minimum of three engineers will undertake this endeavor, and all team members will unanimously authorize the test by their signatures.
6. The test will follow FAA guidelines and BLM laws. Written permission from site administrators will be obtained. It may be required to purchase liability insurance for the test.
7. Before traveling to the test site, the engineers will kneel and pray together. They will brief their systems to God and will ask His final approval. The test will not be conducted unless each engineer feels unequivocal divine approval.
